

NGT-2000 Price Match

L3 will match the published price of any certified ADS-B Out only solution with the ADS-B In/Out Lynx NGT-2000.

The Lynx NGT-2000 is an ADS-B In/Out remote device that works with existing transponders. It features an internal rule-compliant position source (WAAS/GPS) and a wi-fi interface that displays traffic, weather and TFRs on popular tablet apps like ForeFlight. When coupled with a popular Mode C or S transponder (Sandia STX-165, Garmin GTX 327, GTX 330), the NGT-2000 model is one of the most straightforward and inexpensive options for ADS-B integration.

Why settle for the bare minimum of ADS-B Out Only?
Get the added benefit of ADS-B In and view weather and traffic on your iPad for less with the Lynx NGT-2000.
