Collision Avoidance Upgrade with ADS-B Out

1. Introduction

1.1 Purpose of this Operator Sales Bulletin

BendixKing is pleased to offer a Collision Avoidance System upgrade bundled with Automatic Dependent Surveillance – Broadcast, better known as ADS-B Out.

This Operator Sales Bulletin describes the best value offered to retrofit your CAS 67A Traffic Collision Avoidance System (TCAS) with safety enhancements including the following:

- ADS-B Out form factor compatible retrofit for MST 67A Mode S transponders;
- Collision Avoidance software updates for the BendixKing CAS 67A system for the following TCAS II processors:
 - TPU 67B PN: 066-01146-2221 replaces TPU 67A PN: 066-01146-1211;
 - TPU 67B Part Number 066-01146-2121 replaces TPU 67A PN: 066-01146-1111.

1.2 Product/STC Availability

This BendixKing Collision Avoidance System upgrade with ADS-B Out will retrofit your aircraft with an MST 70B ADS-B Out transponder and upgrade your existing CAS 67A TCAS system to the 7.1 software version. Many legacy Gulfstream, Falcon, Hawker, Challenger, Citation and Learjet aircraft are equipped with CAS 67A and are included in the approved list of aircraft.

To further ease the installation and approval of this bundle, FAA-approved Supplemental Type Certificates (STC) have been released (STC number ST02609LA for ADS-B Out and ST00790DE for TCAS II change 7.1).

It is important to confirm that your aircraft and equipment are approved for installation and are compliant with the STC's offered in this upgrade. The compliant aircraft model and equipment list for this promotion can be found at:

http://go.bendixking.com/Collision_Avoidance_Upgrade.pdf

This list will be periodically updated as this STC evolves.

2. Program Incentives

For USA and Canada, a rebate of **\$10,000.00 USD** for the Collision Avoidance System Upgrade with ADS-B Out will be offered to customers who purchase this upgrade from May 1st, 2017 through December 30th, 2017. Deliveries must be scheduled by December 30th, 2017.

Non-USA and non-Canadian customers will receive a **\$10,000.00 USD** credit from their international dealer from May 1st, 2017 through December 30th, 2017. Deliveries must be scheduled by December 30th, 2017.

Customers may request that the \$10,000.00 credit be applied to their bundled purchase by completing the rebate form found at the link below and providing the completed rebate form to their non-USA or non-Canadian dealer.

All rebate customers are required to complete the rebate form found at the following link:

3. Product Description

3.1 CAS 67A/B TCAS II

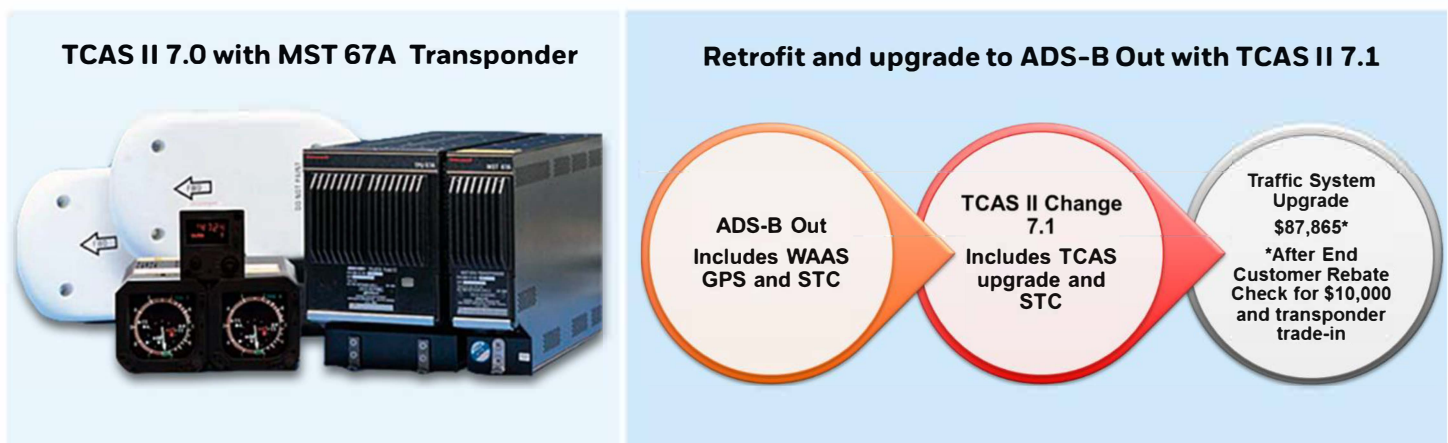

BendixKing's CAS 67B TCAS II system upgrade meets global TCAS II standards for collision avoidance including the software version 7.1 mandate for the European Union. The CAS 67B upgrade offers two levels of collision avoidance protection in today's increasingly complex flight environment. First, it serves as a moving line of defense against midair collisions. Second, it will dramatically increase situational awareness with new safety improvements (offered by the 7.1 software version) by reporting "Level off" and "Reversal" traffic avoidance instructions if the aircraft is not responding correctly to traffic intruders.

3.2 MST 70B

The MST 70B ADS-B Out transponder is global mandate-compliant and a direct replacement for MST 67A Mode S transponders. By reusing the existing mounting trays and connectors, the downtime for the retrofit is significantly reduced.

4. Value and Benefits

The BendixKing Collision Avoidance Upgrade with ADS-B Out combines TCAS II with Software change 7.1 and ADS-B Out for your CAS 67A System.

TCAS II 7.0 with MST 67A Transponder

Retrofit and upgrade to ADS-B Out with TCAS II 7.1

and transponder
trade-in

4.1 Benefits

- TCAS II with software upgrade version 7.1 improves existing collision avoidance equipment by reporting “Level off” and “Reversal” traffic avoidance instructions if the aircraft is not responding correctly to traffic intruders.
- Automatic Dependent Surveillance – Broadcast Out (ADS-B Out) – adds ADS-B Out required information reporting that is compliant with global ADS-B Out airspace mandates.
- MST 70B ADS-B Out transponder retrofit for the MST 67A Mode S transponder uses existing MST 67A rack and connector for reduced installation cost and aircraft downtime.
- The BendixKing Collision Avoidance upgrade with ADS-B Out provides simple mandate compliance versus two manufacturers.

4.2 Value

The BendixKing Collision Avoidance System Upgrade with ADS-B Out is a one-stop solution and offers the best value at \$87,865 USD (after rebate and MST 67A transponder trade-in). This solution can also be included in your HAPP (Honeywell Avionics Protection Plan).

5. Promotion Pricing
